Launching instructions:

- ## For the 23-Hadafi.zip:

  1. Open GitHub repository

  2. Click the **<> Code** button at the top of the repository and select the Download ZIP option, or from the submission link.

  3. Extract the project files.

  4. Open the extracted folder in an IDE such as Visual Studio Code or Android Studio.

  5. Click on File > Open > Location of the saved unzipped file, then click on Ok

  6. Follow the instructions in the .env.example file, contact the developers for the API keys and firestore files.

  7. Connect your IDE to an androoid emulator.

  8. Run the project on the emulator.

- ## For the 23-Hadafi.apk:

  1. Download the .apk file.

  2. Run it on an android physical device.
